An extensive range of products and tools in wood, felt, plexiglass and natural fibres for metal polishing. Almost 80% of the production is made in Italy with raw materials of the highest quality from certified sources. Accurate production control allows Sverital[®] to offer its customers strong and durable products.

WOOD LAPPING STICKS

WOOD LAPPING STICKS

Wood lapping sticks are ideal tools for lapping and polishing with diamond compounds. Available in three different hardnesses of wood, the sticks are versatile and can be shaped to reach even the edges and profiles more difficult to polish. Thanks to their smooth surface, the wood lapping sticks ensure a uniform and high-quality finish.

FELT LAPPING STICKS

cavities or flat surfaces of molds and steel dies.

Plexiglas lapping sticks are an excellent alternative to wood lapping sticks, generally used for lapping or polishing mold and dies in steel or carbide. They are particularly suitable for use with diamond paste and retain the geometry of the part being processed. They can be used by hand or through an alternative motion tool.

POLISHING BRUSHES

SUPERFINISHING MATERIALS AND TOOLS / FELT, BRUSHES AND POLISHING TOOLS

POLISHING BRUSHES

Polishing brushes available in natural, synthetic and metal bristles are ideal for removing contamination from surfaces such as scale, rust, dirt, slag and paint. These brushes are also suitable for cleaning, deburring and surface preparation for subsequent treatments such as bonding other materials and polishing with fine diamond pastes. Made with selected quality materials, they are available in natural bristles, steel and brass.

POLISHING BRUSHES

MOUNTED COTTON BRUSHES

Mounted cotton brushes are used in the last stage of polishing, after treatment with felt and together with diamond pastes, to remove shading and obtain a perfect finish on stainless steel. It is important to avoid excessive manual pressure on the tool to obtain the maximum result.

MOUNTED WOOD BOBS

SUPERFINISHING MATERIALS AND TOOLS / FELT, BRUSHES AND POLISHING TOOLS

MOUNTED WOOD BOBS

Mounted wood bobs are available in different varieties of wood, from soft to hard, and are used for machining carbide dies through lapping and polishing with diamond paste. The hardwood versions remove the rows left by the diamond file and lapp the die, while those in soft or softwood are used for the final polishing stage.

SUPERFINISHING MATERIALS AND TOOLS / FELT, BRUSHES AND POLISHING TOOLS

FELT BOBS

Felt bobs are made of high-quality merino wool and are available in two different hardnesses: soft and hard. They are ideal for use with diamond pastes to obtain a specular finish on molds. It is recommended to use them at a rotation speed between 5-10 m/s and the dimensions may vary up to $\pm 5\%$.

FELT BOBS

SHAPE

FELT BOBS

MOUNTED FELT FLAP BOBS

Mounted felt flap bobs are made of high-quality merino wool and feature a lamella structure that effectively retains the diamond paste or silicon carbide. Thanks to their cylindrical shape and flat or domed head, these flap bobs are ideal for lapping or polishing cavities, holes, or surfaces of shaped dies, easily adapting to the shape of the workpiece.

FELT BOBS

UNMOUNTED FELT BOBS

Unmounted felt bobs are made of high-quality merino wool and are available in two different hardnesses: soft and hard. They are ideal for use with diamond pastes to obtain a specular finish on molds, dies, etc. It is recommended to use them at a rotation speed between 5-10 m/s and the dimensions may vary up to $\pm 5\%$.

FELT AND FIBER LAPPING DISCS ON HOLDERS

FELT AND FIBER LAPPING DISCS ON HOLDERS

Felt and fiber discs for discs on holders are made with merino wool or high-quality synthetic fiber. They are ideal for use with diamond pastes to obtain a specular finish on molds for plastic, dies, etc. The supports are available in soft or hard rubber.

FELT AND FIBER LAPPING DISCS

Felt and fiber lapping discs can be used on holders with rotary lapping instruments. The adhesive side allows it to adhere well to the surface of the holders and to withstand the pressure exerted during processing.
